Metrics	Description	Rationale
Total revenue	Total No nights booked * Nightly Rate.	Core metric that indicates the overall revenue to the host for a period
Avg Nightly rate comparision	Avg nightly rate for listings by host Vs Avg nightly rate for Listings in city Vs Avg nightly rate for listing from competitors	This is to indicate the pricing position of host and highlight if they are priced above/below the market avg, competitors avg price
Booking conversion funnel	3 steps considered View Listing -> Proceed Payment -> Complete Payment Conversion rate at each stage w.r.t to View Listing	Indicates overall view to booking conversion rate and gives breakdown for each stage so that host can be aware of where the drop-off happens
Average Cancellation Analysis	Cancellation rate over months categorized by Cancellation reasons	This would help the host to understand lost revenue due to cancellation,reasons for cancellation
Upcoming events/Surge	A trend analysis graph which can highlight avg price (listed by host) for the same time period in past 4 years and predicted price for upcoming weeks .Categorize them based on events in town,holiday season and displayed by price,week	This metric would enable the host to price their listings for holiday seasons,events based on past data and forecasting instead of guesswork/instincts
Lead time analysis	For each listing, display the Check-In Date and lead time from current day. Any bookings that are less than 7 days lead time are highlighted	This would inform the host about upcoming bookings and alert on listings that are slipping
