PROFESSIONAL PROFILE

Technical Product Owner (Senior) with 12+ years across financial services and fintech, moving from QA and test automation through IT business analysis into product ownership. Comfortable working with REST APIs, Postman, Swagger, and SQL, and experienced writing clear, technically grounded user stories and acceptance criteria in close collaboration with engineering, QA and architecture. Practical day-to-day user of AI tools (Microsoft Copilot, NotebookLM) for story drafting, acceptance criteria generation and requirements synthesis, and currently building further AI product skills through prompt engineering, RAG prototyping, and hands-on use of AI app-builder tools such as Google AI Studio, N8N workflow automation. SAFe POPM certified.

My Project Portfolio - <https://saranya-selvaraj.github.io/>

CORE COMPETENCIES

Backlog Ownership & Prioritisation • API-Driven User Stories & Acceptance Criteria • SAFe PI Planning & Refinement • Stakeholder Requirements Gathering • AI-Assisted Product Workflows (Prompting, RAG Prototyping) • Cross-Functional Delivery with Engineering, QA & Architecture

PROFESSIONAL EXPERIENCE

IT Business Analyst (hybrid BA / Product Owner) - FBD Insurance

Dec 2023 – Present

- Functioned in a Tech BA/product ownership capacity within project teams - owning the JIRA backlog, writing user stories and acceptance criteria, and leading sprint elaboration, reflecting FBD's BA-led team structure.
- Led story creation and backlog prioritisation for a major digital transformation migrating 14 insurance products from paper-based proposal forms to a fully paperless Statement of Fact - translating CBI regulatory and business requirements into user stories and acceptance criteria for cross-functional teams (UX, engineering, QA), ensuring features met compliance and data protection obligations under GDPR.
- Defined and prioritised features for onboarding and full lifecycle implementation of a third-party insurance platform covering New Business, MTAs, and Renewals for broker motor products.
- Applied Microsoft Copilot and other AI-assisted tools day-to-day to accelerate story drafting, acceptance criteria generation, and requirements synthesis; used NotebookLM for requirements synthesis and edge case generation.
- Delivered Power Automate workflows and Power BI reports to automate customer quote pack document generation and operational reporting, reducing manual effort and improving data accuracy.
- Collaborated with engineering to assess business impact of an enterprise-wide SQL Server infrastructure upgrade; coordinated UAT across core systems, data warehouse and e-commerce platforms, and supported a PIA/LIA for a vendor data integration initiative involving personal data.
- Building hands-on AI product knowledge alongside day-to-day work: prompt engineering, LLM fundamentals, RAG concepts, and agentic AI for workflow automation, applied through personal prototyping (see AI Product Project below).

Senior Technical Product Manager (TPO) - Mastercard

Jan 2021 – Dec 2023

- Owned backlog and PI planning for two compliance-critical product streams: Consumer Controls (API-driven fraud prevention, transaction alerts, and card security rules used by global financial institutions) and Digital Identity Services - products operating under PCI-DSS, GDPR, and financial regulatory requirements across multiple markets.
- Wrote and managed technical user stories in ALM Rally for API-centric and data-driven features, including new REST API creation, monolith-to-microservices migration, GDPR consent and cookie management, fraud rules configuration, and application decommission.
- Led sprint refinements and estimation sessions end-to-end with scrum teams; presented feature elaborations to wider PI audiences and supported feature demos and UAT sign-off for product managers.
- Worked with integration and API teams on technical story definitions, acceptance criteria, and cross-team dependency management across multiple squads in a SAFe scaled environment.

Senior Systems Analyst – Salesforce - *Fidelity Investments*

Dec 2020 – Dec 2021

- Led requirements gathering and user story creation for migration of data and processes from legacy systems to Salesforce, working across business, product, and engineering teams.
- Designed and configured Salesforce solutions including custom objects, Lightning screens, process automation, and case management for an Investment Research Services POC.
- Managed backlog, sprint planning, and change requests; executed functional and UAT testing of Salesforce capabilities.

Senior QA Engineer - *Fidelity Investments*

May 2015 – Dec 2020

- Led QA strategy, planning, and coordination across multiple squads on the Commissions Manager application - covering test plans, manual and automation execution, and release regression/UAT with business stakeholders and vendors.
- Drove adoption of an API automation suite (FitNesse) for REST and data testing, improving automation coverage and testing efficiency across integration-heavy financial services applications.
- Hands-on testing of commissions and reporting systems with primary focus on API testing (Postman, FitNesse), data validation (ICEDQ, SQL), and reporting validation (OBIEE).

Test Analyst / Module Lead - *TCS - Client: Citibank USA*

Jan 2013 – Aug 2014

- Delivered integration and regression testing across multiple banking product streams including Account Opening, Fraud Detection, Rewards, and Statements consolidation.

Assistant Systems Engineer - *TCS - Client: Lloyds Banking Group UK*

Feb 2010 – Mar 2011

- Supported HBOS/LTSB data migration project - requirement traceability, build sanity testing, and defect reporting using Quality Center.

AI PRODUCT PROJECT

NutriMed Ask - RAG Prototype (Personal / Coursework Project)

- Built a nutrition/medical assistant prototype for the Irish Nutrition & Dietetic Institute (INDI) public content, helping users understand conditions, nutrition, diets and treatments to support self-management.
- Applied hands-on prompt engineering and evaluated retrieval/response quality as part of the build.

TECHNICAL SKILLS

- Product Tools: JIRA, ALM Rally, Confluence, Miro
- API & Testing: Postman, Swagger, FitNesse, REST API testing, SQL (Oracle SQL Developer)
- Agile Frameworks: SAFe (PI Planning, Refinement, Iteration Planning), Scrum
- CRM & Analytics: Salesforce (Admin Certified), Power BI, Power Automate
- Automation: Selenium WebDriver, Cucumber, FitNesse Wiki, HP QTP
- AI Tools: Microsoft Copilot (story drafting, AC generation), NotebookLM (requirements synthesis, edge case generation), Google AI Studio, Base44, AWS PartyRock, Cursor (early exposure)
- AI/Product Fundamentals (self-directed learning): prompt engineering, LLM basics (training/validation concepts), RAG architecture, agentic AI concepts for workflow automation
- Other: MS Office Suite, Citrix XenApp, VMware

EDUCATION & CERTIFICATIONS

- SAFe PO/PM Certification (Aug 2023) • BCS Practitioner Certificate in Requirements Engineering (Jun 2025)
- BCS Foundation Certificate in Business Analysis v4.1 (Jul 2024) • Salesforce Administrator Certification (2020)
- ISTQB Foundation Certification (2013) • B.E. Computer Science Engineering, Anna University, Chennai (2009)
